Low voltage

Process performance motors
400 V 50 Hz, 460V 60 Hz

With expertise, and a comprehensive portfolio of products and life-cycle services, we help value-minded industrial customers improve their energy efficiency and productivity.

Low voltage Process performance motors

Sizes 56 to 450, 0.09 to 1000 kW

International motor efficiency standards and regulations

Since the validation of IEC 60034-30:2008 and its refined version IEC 60034-30-1:2014, a worldwide energy efficiency classification system has existed for low voltage three-phase asynchronous motors. These international standards have been created to enable and increase the level of harmonization in efficiency regulations around the world and to also cover motors for explosive atmospheres.

IEC 60034-30-1:2014 defines International Efficiency (IE) classes for single speed, three-phase, 50 Hz and 60 Hz induction motors. The efficiency levels defined in IEC 60034-30-1 are based on the test method specified in IEC 60034-2-1:2014. Both standards are part of an effort to unify motor testing procedures with CSA390-10 and IEEE 112 standards as well as efficiency and product labeling (IE) requirements to enable motor purchasers worldwide to easily recognize premium efficiency products.

To promote transparency in the market, IEC 60034-30-1 states that both the efficiency class and efficiency value must be shown on the motor rating plate and in product documentation. The documentation must clearly indicate the efficiency testing method used as different methods can produce differing results.

Minimum energy performance standards

While the IEC as an international standardization organization sets guidelines for motor testing and efficiency classes, the organization does not regulate efficiency levels in countries. The biggest drivers for mandatory Minimum Energy Perfor-

mance Standard (MEPS) levels for electric motors are global climate change, government targets to curb CO₂ emissions and rising electricity demand, especially in developing countries. The whole value chain, from manufacturer up to end user, must be aware of the legislation in order to meet local requirements, to save energy and reduce the carbon footprint.

Harmonized global standards and the increasing adoption of MEPS around the world are good news for all of us. However, it is important to remember that harmonization is an ongoing process. Even though MEPS are already in effect in several regions and countries, they are evolving and differ in terms of scope and requirements. At the same time, more countries are planning to adopt their own MEPS regulations. A view of existing and coming MEPS regulations in the world can be seen on the World map above.

IEC 60034-30-1:2014

This standard defines four International Efficiency (IE) classes for single speed electric motors that are rated according to IEC 60034-1 or IEC 60079-0 (explosive atmospheres) and designed for operation on sinusoidal voltage.

- IE4 = Super premium efficiency
- IE3 = Premium efficiency, identical to the table in 10CFR431 ('NEMA Premium') in the USA and CSA C390-10:2015 for 60 Hz
- IE2 = High efficiency
- IE1 = Standard efficiency

IEC 60034-30-1 covers the power range from 0.12 kW up to 1000 kW. Most of the different technical constructions of electric motors are covered as long as they are rated for direct on-line operation. The coverage of the standard includes:

- Single speed electric motors (single and three-phase), 50 and 60 Hz
- 2, 4, 6 and 8 poles
- Rated output P_N from 0.12 kW to 1000 kW
- Rated voltage U_N above 50 V up to 1 kV
- Motors capable of continuous operation at their rated power with a temperature rise within the specified insulation temperature class
- Motors, marked with any ambient temperature within the range of -20 °C to +60 °C
- Motors, marked with an altitude up to 4000 m above sea level

By comparing IEC 60034-30-1 to CSA C390-10:2015 and "10CFR431 Subpart B – Electric motors", it can be seen that the efficiency limits and tables are well aligned and their major difference is in the scope of the output power where CSA and 10CFR431 have a maximum power of 500 hp. There are also some minor differences in the scope of excluded motors.

Note: CFR is Code of Federal Regulations.

The following motors are excluded from IEC 60034-30-1:

- Single-speed motors with 10 or more poles or multi-speed motors
- Motors completely integrated into a machine (for example pump, fan or compressor) that cannot be tested separately from the machine
- Brake motors, when the brake cannot be dismantled or separately fed

ABB and efficiency standards

ABB determines efficiency values according to IEC 60034-2-1 using the low uncertainty method (i.e. summation of losses), with additional load losses determined by the method of residual loss.

It is good to mention and emphasize that the IEC 60034-2-1 test method, which is known as an indirect method, is technically equivalent to the test methods in the standards CSA 390-10 and IEEE 112 Method B leading to the equivalent losses and thus efficiency values. Both test methods can be used by ABB and shall be used for both Canada and the US where IEC 60034-2-1 is not recognized yet.

As the world market leader, ABB offers the largest range of LV motors available. It has long advocated the need for efficiency in motors, and high efficiency products have formed the core of its portfolio for many years. The core of ABB's Process performance range is based on a full range of IE2 and IE3 motors - with many available from stock. We also supply IE4 motors for additional energy savings.

**Nominal efficiency limits defined in IEC
60034-30-1:2014 (reference values at 50 Hz,
based on test methods specified in IEC 60034-
2-1:2014).**

General information

Cooling

Designation system concerning methods of cooling refers to standard IEC 60034-6.

Explanation of the product code

International Cooling	Circuit arrangement	Primary coolant	Method of movement of primary coolant	Secondary coolant	Method of movement of secondary coolant
IC	4	(A)	1	(A)	6
	1	2	3	4	5

Position 1

0:	Free circulation (open circuit)
4:	Free circulation (open circuit)

Position 2

A:	For air (omitted for simplified designation)
----	--

Position 3

0:	Free convection
1:	Self-circulation
6:	Machine-mounted independent component

Position 4

A:	For air (omitted for simplified designation)
W:	For water

Position 5

0:	Free convection
1:	Self-circulation
6:	Machine-mounted independent component
8:	Relative displacement

General information

Degrees of protection: IP code/IK code

Classification of degrees of protection provided by enclosures of rotating machines refers to:

- Standard IEC 60034-5 or EN 60529 for IP code
- Standard EN 50102 for IK code

IP protection

Protection of persons against getting in contact with (or approaching) live parts and against contact with moving parts inside the enclosure. Also protection of the machine against ingress of solid foreign objects. Protection of machines against the harmful effects due to the ingress of water.

Explanation of the IP code

Ingress protection	Degree of protection to persons and to parts of the machine inside the enclosure	Degree of protection provided by the enclosure with respect to harmful effects due to ingress of water
IP	5	5
	1	2

Position 1

2:	Motors protected against solid objects greater than 12 mm
4:	Motors protected against solid objects greater than 1 mm
5:	Dust-protected motors
6:	Dust-tight motors

Position 2

3:	Motors protected against spraying water
4:	Motors protected against splashing water
5:	Motors protected against water jets
6:	Motors protected against heavy seas

IK code

Classification of degrees of protection provided by enclosure for motors against external mechanical impacts.

Explanation of the IK code

International mechanical protection	Characteristic group
IK	08
	1

Position 1

Relation between IK code and impact energy:

IK code	Impact energy/Joule
0:	Not protected according to EN 50102
01:	0.15
02:	0.2
03:	0.35
04:	0.5
05:	0.7
06:	1
07:	2
08:	5 (ABB Standard)
09:	10
10:	20

Insulation

—
01 Safety margins per thermal class.

ABB uses class F insulation, which, with temperature rise B, is the most common requirement among industry today.

The use of class F insulation with class B temperature rise gives ABB products a 25 °C safety margin. This can be used to increase the loading for limited periods, to operate at higher ambient temperatures or altitudes, or with greater voltage and frequency tolerances. It can also be used to extend insulation. For instance, a 10 K temperature reduction will extend the insulation life.

Thermal class 130 (B)

- Nominal ambient temperature 40 °C
- Max permissible temperature rise 80 K
- Hot spot temperature margin 10 K

Thermal class 155 (F)

- Nominal ambient temperature 40 °C
- Max permissible temperature rise 105 K
- Hot spot temperature margin 10 K

Thermal class 180 (H)

- Nominal ambient temperature 40 °C
- Max permissible temperature rise 125 K
- Hot spot temperature margin 10 K

01

General information

Voltage and frequency

01 Voltage and frequency deviation in zones A and B.

The impact on temperature rise caused by voltage and frequency fluctuation is defined in IEC 60034-1. The standard divides the combinations into two zones, A and B. Zone A is the combination of voltage deviation of $\pm 5\%$ and frequency deviation of $\pm 2\%$. Zone B is the combination of voltage deviation of $\pm 10\%$ and frequency deviation of $\pm 3\%$. This is illustrated in figure below.

Motors are capable of supplying the rated torque in both zones A and B, but the temperature rise will be higher than at rated voltage and frequency. Motors can be run in zone B only for a short period of time.

Key	
X axis	frequency p.u.
Y axis	voltage p.u.
1	zone A
2	zone B (outside zone A)
3	rating point

01

Surface treatment

The surface treatment categorization of ABB motors is based on the ISO 12944 standard. ISO 12944-5 divides paint system durability into three categories: low (L), medium (M), and high (H). Low durability corresponds to a lifetime up to 7 years, medium to 7 – 15 years, high durability 15-25 years, and very high over 25 years.

The durability range is not a guaranteed lifetime. Its purpose is to help the owner of the motor plan for appropriate maintenance intervals. More frequent maintenance may be required because of fading, chalking, contamination, wear and tear, or for other reasons.

ABB's standard surface treatment is corrosivity category C3, durability range M (which equal to medium corrosivity and medium durability). Special surface treatment is available in corrosivity categories C4 and CX. In addition, surface treatment according to the NORSOK standard for offshore environments is available as an option.

The standard ABB paint color for motors is Munsell blue 8B 4.5/3.25 except for special systems such as Norsok where a specific color is requested.

Corrosivity category	Outdoor atmospheres	Indoor atmospheres	Use in ABB motors
C1, very low	Not used	Heated buildings with clean atmospheres	Not available
C2, low	Atmospheres with low level pollution, mostly rural areas.	Unheated buildings where condensation may occur, such as depots and sports halls.	Not available
C3, medium	Urban and industrial atmospheres, moderate sulfur dioxide pollution. Coastal areas with low salinity.	Production rooms with high humidity and some air pollution; food processing plants, laundries, breweries, dairies.	Standard treatment
C4, high	Industrial areas and coastal areas with moderate salinity.	Chemical plants, swimming pools, coastal ship- and boatyards.	Optional treatment for cast iron motors, variant code 115
C5, very high (industrial)	Industrial areas and coastal areas with high humidity and aggressive atmosphere.	Buildings or areas with nearly permanent condensation and high pollution.	Not available
CX, very high (marine)	Coastal and offshore areas with high salinity.	Buildings or areas with nearly permanent condensation and high pollution.	Optional treatment for cast iron motors, variant code 754, 711

Atmospheric corrosivity categories and recommended environments.

Variable-speed drives with process performance motors

Frequency converters provide significant benefits when used together with ABB process performance motors. The advantages include better process control and energy savings through regulation of motor speed, and smooth starting with reduced inrush current, reducing the stress on the equipment and supply network.

By choosing an ABB motor–drive package, users can be confident that the motor and drive combination is optimized for their application; it is a working package with known performance, as the combination has been tested and verified.

Process performance motors are designed for both DOL and variable-speed operation, and will, either as standard or by adding a few extras, be suitable for variable-speed operation.

When selecting process performance motors for VSDs, the following points must be taken into consideration. The DriveSize selection software available at www.abb.com helps in selecting the optimal combination of motor, drive and supply transformer.

Operating speed

Process performance motors are designed to work over a wide speed range and also at speeds significantly higher than nominal. The maximum speeds can be found on motor rating plates or in DriveSize. In addition to motor speed, make sure that the maximum or critical speed of the entire application is not exceeded.

Guideline maximum speed values for process performance motors are shown in Table 1.

Motor size	Maximum speed, r/min	
	2-pole motors	4-pole motors
71-80	6000	4000
90-100	6000	6000
112-200	4500	4500
225-250	3600	3600
280	3600	2000
315	3600	2200
355 SM, ML, LKA	3600	2200
355 LKB	3000	2200
400	3600	2200
450	3000	2200

Table 1. Guideline maximum speed values for process performance motors.

Ventilation

When the motor is operating at low speeds, the cooling capacity of the fan decreases, which again reduces the motor's load capacity. A separate, constant-speed fan (variant codes 183, 422, 514) can be used to increase cooling capacity at low speed if required for loads with constant torque characteristics.

Lubrication

The lubrication interval of regreasable bearings depends on the running speed of the motor and the bearing temperature. Motors in frame size 280 and larger are delivered as standard with a lubrication plate in tabular format that states the relubrication intervals at different speeds and temperatures. A similar plate is optional for sizes 160–250 and can be ordered using variant code 795. Smaller motors usually have greased, sealed-for-life bearings. Please refer to the installation, operation and safety manual for further information on lubrication.

Winding insulation

To ensure that motors operate reliably, the effects of non-sinusoidal output voltages from the converter must be taken into consideration when selecting the correct insulation system for the motor and output filters for the converter. The insulation and filters must be selected according to Table 2.

Winding insulation and filters required	
$U_N \leq 500$ V	Standard insulation
$U_N \leq 600$ V	Standard insulation + dU/dt filters OR Special insulation (variant code 405)
$U_N \leq 690$ V	Special insulation (variant code 405) AND dU/dt-filters at converter output
$600 \text{ V} < U_N \leq 690$ V cable length > 150 m	Special insulation (variant code 405)

Table 2. Selection of motor winding insulation and converter output filters

For more information on dU/dt filters, see the relevant ABB drives catalogs.

For other converters and cases where the guidelines shown in Table 2 cannot be applied, selection must be based on the voltages present at the motor terminals.

—
01 Maximum allowed phase-to-phase voltage peaks at motor terminals, as a function pulse rise time.

Allowed phase-to-ground voltage peaks at motor terminals:

- 1,300 V peak: standard insulation
- 1,800 V peak: special insulation, variant code 405

The maximum allowed phase-to-phase voltage peaks at the motor terminals as a function of pulse rise time are shown in Figure 01. The higher curve (special insulation) applies to motors with special winding insulation for frequency converter supply (variant code 405). Standard insulation applies to motors with a standard design.

—
01

Bearing currents

Bearing voltages and currents must be avoided in all motors to ensure reliable operation of the entire application. Table 3 gives the selection rules depending on motor output power and frame size when used together with ABB converters; the same rules can also be applied as guidance when using ABB process performance motors with other converters.

Nominal power (P_N and / or Frame size (IEC))	Precautionary measures
$P_N < 100$ kW	No action needed
$P_N \geq 100$ kW OR IEC 315 ≤ Frame size ≤ IEC 355	Insulated non-drive end bearing
$P_N \geq 350$ kW OR IEC 400 ≤ Frame size ≤ IEC 450	Insulated non-drive end bearing AND Common mode filter at the converter

Table 3. Precautionary measures to avoid bearing currents in variable speed drives.

Common mode filters

Common mode filters are installed at the output of the frequency converter. These filters reduce common mode currents and so decrease the risk of bearing currents. Common mode filters do not significantly affect the phase of main voltages on motor terminals. For more information, see ABB drives catalogs.

Insulated bearings

ABB uses bearings with an insulated outer race or hybrid bearings with ceramic rolling elements. Insulated bearings at the non-drive end should be selected as indicated in Table 3. This solution can be ordered using variant code 701.

Earthing and cabling

For motors with a nominal power above 30 kW, cables with a symmetrical concentric protective earth should be used across the system. The same type of cables are also recommended for motors with an output of 30 kW and below.

Solutions for persistent bearing currents

In very rare cases, bearing currents might still exist even if the measures specified above have been taken. For such installations, there are two advanced methods that would provide a remedy: either a shaft grounding bush, or insulated bearings at both ends.

The shaft grounding bush is installed inside the motor to protect it from the environment and ensure good grounding of the shaft. The shaft grounding brush can be ordered using variant code 588.

The second advanced solution is to mount insulated bearings at both ends. These can either be bearings with an insulated out race, or hybrid bearings with ceramic rolling elements. Insulated bearings at both ends can be ordered using variant code 702. Note that this variant cannot be combined with special drive-end bearing solutions, such as roller bearings or angular contact ball bearings.

Electromagnetic compatibility (EMC)

The high-frequency components in a variable-speed drive might cause electromagnetic interference with other equipment in the installation. To avoid this, certain measures should be taken. To meet EMC requirements, special EMC cables glands with a 360° connection to the concentric protective earth conductor should be used. Such cable glands can be used with variant code 704.

Motor loadability with frequency converter drives

The difference in the temperature rise of a motor run direct on line compared to the same motor run with a converter is influenced by factors such as the cooling effect of a shaft-mounted fan depending on the speed of the motor, increased losses due to harmonics generated by the converter and reduced flux above the field weakening point. The effects of all these factors are combined in the loadability curves.

The loadability curves shown in Figures 02-05 are generic and give indicative guidelines for dimensioning standard low-voltage motors used with a frequency converter.

The curves show the maximum continuous load torque as a function of frequency (speed), which results in the same temperature rise as opera-

tion with the rated sinusoidal supply at nominal frequency and full rated load.

Normally, process performance motors operate according to a class B temperature rise. For these motors, dimensioning should be according to the temperature rise B curve, or the motor can be slightly overloaded. In other words, it can be dimensioned according to the temperature rise F curve. However, if only a class F temperature rise with a sinusoidal supply is indicated for the motor in the technical data section, dimensioning must be done according to temperature rise curve B. If the motor is loaded according the temperature rise F curve, it will be necessary to check the temperature rise in other parts of the motor and ensure that the lubrication intervals and grease type are still appropriate.

02 Loadability curves for ABB frequency converters with DTC control.

03 Loadability curves for other frequency converters.

04 Loadability curves for ABB frequency converters with DTC control.

05 Loadability curves for other frequency converters.

Curves are valid for a field weakening point of 50 Hz.

Efficiency values are given according to IEC 60034-2-1; 2014

For detailed dimension drawings please see our web-pages 'www.abb.com/motors&generators' or contact ABB.

Rating plates

01 Rating plate example, motor size 100, IE2.

02 Rating plate example, motor size 160, K generation, IE3.

03 Rating plate example, motor size 315, L generation, IE3.

04 Rating plate example, motor size 315, IE4.

The motor's main rating plate shows the motor's performance values with various connections at nominal speed. The rating plate also shows the efficiency level (IE2, IE3, or IE4), year of manufacture, and the lowest nominal efficiency at 100, 75, and 50 % nominal load.

The plate samples shown on this page present typical data rows. The actual content of the plate may vary according to your order and according to the motor's IE class.

Variant codes

Cast iron motors

Variant codes specify additional options and features to the standard motor. The desired features are listed as three-digit variant codes in the motor order. Note also that there are variants that cannot be used together.

Most of the variant codes apply to IE2, IE3, and IE4 motors. However, confirm the availability of variants for IE3 and IE4 motors with your ABB sales office before making an order.

Mechanical design

Motor frame and drain holes

—
01 As standard,
motor sizes 71 - 450 are
delivered with drain holes
and closable plugs.

Motor frame

The motor frame, end shields and main terminal box are made of cast iron. Feet are integrated with the frame, except for sizes 160-250 with side mounted terminal box, which have detachable feet.

Motors can be supplied for foot mounting, flange mounting, and combinations of these.

Drain holes

Motors are provided with drain holes fitted with closable plugs as standard. The plugs are made of plastic material and are delivered in open position.

When mounting arrangement differs from foot mounted IM B3, mention variant code 066 when ordering to ensure the drain plug is mounted in the lowest position.

Lifting lugs

The motors are provided as standard with lifting lugs according to the table below. For improved lifting possibilities can variant code 305 be added, please refer to the variant code section for information about availability.

Frame size	Type of lugs	Foot mounted motors	Flange mounted motors
71, 80	No lugs, weight of motors is less than 25kg	-	-
90-132	Detachable eye bolt	2 pcs on top of motor diagonally placed, size M8	2 pcs on top of motor diagonally placed, size M8
160-200	Integrated in casting / detachable eye bolt	2 pcs on top of motor diagonally placed, integrated in frame casting	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end. 2 pcs eye bolts size M12 delivered with each motor
225-250	Integrated in casting / detachable eye bolt	2 pcs on top of motor diagonally placed, integrated in frame casting	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end. 2 pcs eye bolts size M16 delivered with each motor
280, 315	Detachable eye bolt	1 pcs close to terminal box on top, size M24	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end, one location on top close to terminal box. 2 pcs eye bolts size M24 delivered with each motor
355	Detachable eye bolt	1 pcs close to terminal box on top, size M30	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end, one location on top close to terminal box. 2 pcs eye bolts size M30 delivered with each motor
400	Detachable eye bolt	1 pcs close to terminal box on top, size M36	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end, one location on top close to terminal box. 2 pcs eye bolts size M36 delivered with each motor
450	Detachable eye bolt	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end, one location on top close to terminal box. 3 pcs eye bolts size M42 delivered with each motor	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end, one location on top close to terminal box. 2 pcs eye bolts size M42 delivered with each motor

Mechanical design

Heating elements

Heating elements are installed into windings to keep them free of corrosion in humid conditions. The required power of heating elements is shown in the table. You can order heating elements with variant code 450 or 451.

Motor size	71	80	90	100	112	132	160	180
Power (W)	8	8	25	25	25	25	25	50

Motor size	200	225	250	280	315	355	400	450
Power (W)	50	50	50	60	2x60	2x60	2x60	2x100

Mechanical design

Bearings

Process performance motors are normally fitted with single-row deep-groove ball bearings, as shown in the table below.

If the bearing at the D-end is replaced with a roller bearing (NU- or NJ-), higher radial forces can be handled. Roller bearings are suitable for belt-drive applications and can be ordered with variant code 037.

When high axial forces are involved, angular-contact ball bearings should be used. When ordering a motor with an angular-contact ball bearing, specify also the method of mounting and the direction and magnitude of axial force. The variant codes for ordering angular-contact ball bearings are 058 and 059.

Standard and alternative designs

Axially-locked bearings

All motors are equipped as standard with an axially locked bearing at the D-end.

Transport locking

Motors with roller bearings or an angular-contact ball bearing are fitted with a transport lock before dispatch to prevent damage to bearings during transport. A warning sign is attached to motors larger than 250 when transport locking is used.

Locking may also be fitted in other cases if severe transport conditions are expected.

Bearing seals

These tables present the standard and alternative sizes and types of bearing seals per motor size.

Bearing seals

Motor size	Num-ber of poles	Standard design		Alternative design
		Axial seal		Radial seal at D-end (DIN 3760)

Table is valid for IE2 motors

Axial seal:

RB45...75 = Gamma-ring

VA16...65 = V-ring, type A

VS80...95 = V-ring, type S

Bearing life and lubrication

Bearing life

The nominal life L_{10h} of a bearing is defined according to ISO 281 as the number of operating hours achieved or exceeded by 90 % of identical bearings in a large test series under specified conditions. 50 % of bearings achieve at least five times this lifetime.

The calculated bearing life L_{10h} for power transmission by means of coupling is for horizontally mounted motors in sizes 280 to 315 $\geq$ 200,000 hours.

Lubrication

On delivery, motors in frame size 160 and above are prelubricated with high-quality grease. Before first start-up, see instructions for relubrication and recommended grease in the Manual for low voltage motors delivered together with the motor, or see the lubrication plate on the motor.

Motors with bearings greased for life

Motors in frame sizes 71 - 132 are equipped with bearings greased for life, while this is available as an option for frame sizes 160 - 250. Bearings are lubricated with high-quality, high-temperature grease. Bearing types are stated on the rating plate.

The approximate lifetime of bearings in four-pole motors is about 40 000 duty hours. Lifetime is subject to the load conditions of the application run by the motor.

Lubrication intervals

ABB follows the L_1 principle in defining lubrication intervals. This means that 99 % of motors will make the interval time.

The lubrication intervals can also be calculated according to the L_{10} principle, which usually gives twice as long interval times. L_{10} values are available from ABB at request.

Motors with relubrication nipples

In frame sizes 280 - 450, the bearing system allows the use of a valve disc to ease lubrication. Motors are lubricated while running.

The grease outlet opening has closing valves at both ends. These should be opened before greasing and closed 1 - 2 hours after regreasing. This ensures that the construction is tight and bearings remain dust- and dirt-free.

A grease-collection method can be used optionally. The following tables show lubrication intervals according to the L_1 principle for various nominal speeds in 25 °C ambient temperature. These values apply to horizontally mounted motors (B3) with 80 °C bearing temperature and high-quality grease containing lithium-complex soap and mineral or PAO-oil.

Lubrication intervals in duty hours for ball bearings

Mechanical design

Radial forces

Permissible loading on the shaft

The following table shows permissible radial forces on the shaft in Newtons, assuming zero axial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life of 20 000 and 40 000 hours per motor size.

These calculated values further assume mounting position IM B3 (foot-mounted), with force directed sideways. In some cases, the strength of the shaft affects permissible forces.

Permissible loads of simultaneous radial and axial forces can be supplied on request.

If the radial force is applied between points X0 and Xmax, the permissible force FR can be calculated with the following formula:

$$F_R = F_{X0} - \frac{X}{E} (F_{X0} - F_{Xmax})$$

Where:

E: length of the shaft extension in the standard version

Permissible radial forces

Mechanical design

Axial forces

01 Mounting arrangement IM B3.

02 Mounting arrangement IM V1.

The following tables present permissible axial forces on the shaft in Newtons, assuming zero radial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life of 20,000 and 40,000 hours per motor size.

At 60 Hz, the values must be reduced by 10 percent, and for two-speed motors, the higher speed determines permissible axial force. Permissible loads of simultaneous radial and axial forces can be supplied on request.

For axial force F_{AD} , it is assumed that the D-bearing is locked with a locking ring.

01

02

Permissible axial forces

¹⁾ On request.

Terminal box

Standard terminal box

Degree of protection and mounting options

The degree of protection for the standard terminal box is IP 55. By default, terminal boxes are mounted on top of the motor at D-end. In motor sizes 71 - 132, the terminal box is integrated in motor frame. On request, the terminal box can also be mounted on the left or right side regardless of motor size (see Mounting options).

Turnability

In frame sizes 71 to 132 the terminal box is integrated into the frame and can therefore not be turned. Please use the variant code 400 if there is a need to have 4*90° turnability.

The standard terminal boxes for motor sizes 160 to 355 can be turned 4*90°. On frame sizes 400-450 the terminal box can not be turned without turning the terminal board. In these frame sizes you need to specify the cable entry direction when ordering, by using the variant codes 022, 468 or 469.

Cable entries

The terminal box is provided with tapped holes for cable glands. No cable glands are included as standard, the entry holes are closed with blanking plugs made of plastic. Very large motors have an angle adapter between the terminal box and the cable gland. Please refer to the table on the next page for further information about the amount and size of threaded holes, plugs and cable sealing units provided as standard.

Different types of cable glands are available as option. Please refer to the terminal box alternatives section for more details.

Cable type and terminations

If no cable type is specified in the order, it will be a PVC-insulated non-armored cable, and its termination parts are determined as shown in the following table.

Terminations are suitable for copper and aluminum cables. Cables are connected to terminals by cable lugs, which are not included in the delivery.

Ordering

To ensure the delivery of desired terminations for the motor, state the cable type, quantity, size, and outer diameter when ordering. Non-standard designs of terminal boxes, such as non-standard size or higher degree of protection, are available as options.

See section Variant codes for all options available.

Standard delivery

Standard delivery if no other information is provided. For other network voltages than voltage code D (see description on page 18) and/or side-mounted motors, please contact your ABB sales office.

**) for frame size 280

Terminal box

Cable glands

The motors are delivered as standard with plugged cable entries or cable sealing units as described in the previous section. There is available a broad selection of different type of cable glands, which are suitable for different types of cable and outer diameter ranges.

Size of threaded opening for cable gland	Cable gland(s) nickel plated brass, variant code 230 or 731	EMC Cable gland(s) nickelplated brass, variant code 704	Cable gland(s) plastic, variant code 375 or 376
Metric (std)	Cable outer diameter, mm	Cable outer diameter, mm	Cable outer diameter, mm
M16 x 1.5	4-12	4-8	4-12
M20 x 1.5	4-12	4-12	4-12
M25 x 1.5	10-18	10-18	10-18
M32 x 1.5	14-24	14-24	14-24
M40 x 1.5	22-32	22-32	22-32
M50 x 1.5	26-35	26-35	26-35
M63 x 1.5 *)	35-45	35-45	35-45
M75 x 1.5	46-62	46-62	not available

Threaded openings for cable glands with NPT thread (variant code 730)

The standard delivery for the motors are provided with openings for cable glands with metric threads as listed in the section describing the standard terminal box. If NPT threads will be needed, the variant code 730 is to be ordered. If nothing else is stated on the order, the sizes in tables below will be delivered.

Motor frame size	Main cable entries	NPT plug
80-112	1 x 3/4"	-
132	2 x 3/4"	1 x 3/4"
160-180	2 x 1 1/4"	1 x 1 1/4"
200-250	2 x 1 1/2"	1 x 1 1/2"
280	2 x 2"	1 x 2"
315-450	2 x 3"	1 x 3"

Motor frame size	Cable entries for auxiliaries	NPT plug
80-112	2 x 3/4"	2 x 3/4"
132	1 x 3/4"	1 x 3/4"
160-450	2 x 3/4"	2 x 3/4"

Gland plates with threaded openings for cable glands of nonstandard size

If the standard size of threaded openings for cable glands is not suitable then nonstandard size openings are also available, either by fitting the reducers to make the openings smaller or by increasing the amount or size of holes. The maximum possible size and amount for each gland plate size is listed below. Threaded openings of non-standard size can be ordered by using variant codes 554 and 727.

Gland plate size	Maximum amount and size of threaded holes
B	2 x M40
C	2 x M63
D	2 x M90 or 3 x M75
E	2 x M90 or 4 x M75

Terminal box

Terminal boxes and boards

01 Integrated terminal box for motor sizes 71 - 132. Tapped holes for cable entries.

02 Terminal board for motor sizes 71 - 80.

03 Terminal board for motor sizes 90 - 112, IE2, and 90 - 100, IE3.

04 Terminal board for motor sizes 132, IE2, and motor sizes 112 - 132, IE3.

05 Terminal box for motor sizes 160 - 250. Connection flanges with tapped cable entries.

06 Terminal board for motor sizes 160 - 250.

The pictures below show standard terminal boxes and the corresponding terminal boards for various motor sizes.

Terminal box

Terminal box alternatives

01 Main terminal box.

02 Adapters, Flange with glands; cable sealing end units.

01

Optional adapters

There is a broad selection of cable termination accessories available to allow termination of one or several cables. The most common ones are explained below.

How to order?

- Check first that the terminal box itself allows mounting of the desired cable and cores (refer to motor type and terminal box type cross reference on previous page)
- If very large cables are used it might be necessary to use a larger terminal box than standard. Select the right cable gland(s) or cable sealing end unit(s) that match outer diameter of the cable(s)
- Select appropriate adapter or flange
- Note that turning the terminal box to a non-standard position might limit the use of some adapters.

Ordering example

Motor Cables	200 kW, 4 pole, 400 V 50 Hz 2 pieces, outer diameter 58 mm, single core cross section 185 mm ² , clamping device needed, cables coming from below
Needed one terminal box for anticondensation heaters and another for temperature detectors, material must be cast iron.	
Motor	M3BP 315 MLA 4-pole, B3
Adapter	D-D - variant code 293
Cable sealing end unit	Variant code 278
Clamping	Variant code 231
Auxiliaries	Variant codes 380, 567, 568

02

Main terminal box and maximum single core cross-section

You can select one size larger than standard terminal box if a larger single cross-section is needed. The standard sizes of the main terminal box are listed in the following table. The terminal box is named according to its current-carrying capacity, from 120 to 1200. Check also the capacity of the cable entry to make sure that the cables fit. A larger terminal box can be ordered with variant code 019.

Standard terminal box	Large terminal box	Size of opening, large box	Max single cross-section mm ² /phase
120	210	B	1 x 70
210	370	C	2 x 240
370	750	D	2 x 300
750	1200	E	4 x 500
1200	-	-	-

Optional adapters

To allow easy termination of cables entering the terminal box from above or below, an angle adapter is recommended. These are available for motor sizes 280 and above and can also be used to allow the mounting of several cable sealing end units or gland plates. For exact suitability on a certain motor size, refer to the 'terminal box opening' column in section Standard terminal box.

Adapter						
Variant code	292	293	294	295	296	444

Cable sealing end units

As an alternative to flanges and cable glands, cable sealing end units can be used. These allow more space for spreading the cores for easy termination.

Cable sealing end units have rubber-sealed entries for one of two main cables. In addition, there are two plugged M20 holes for auxiliary cables.

	Small	Medium	Large
End unit			
Variant code	277	278	279

Auxiliary terminal box

You can equip motors from frame size 160 upward with one or several auxiliary terminal boxes for connection of auxiliaries like heaters or temperature detectors. The standard auxiliary terminal box material for motor sizes 280 - 450 is aluminum and for 160 - 250 cast iron. For 280 - 450, cast iron as box material is also available as an option. Connection terminals are of spring-loaded type for quick and easy connection. These are suitable for up to 2.5 mm² wires. Auxiliary terminal boxes for 280 - 450 are equipped with an earthing terminal. The first auxiliary terminal box is located on the right-hand side at D-end as standard. The standard cable entry size is M20 for the aluminum box and M16 for the cast iron box, and the number of entries depends on the terminal box type and the number of selected auxiliaries.

Related variant codes	
380	Separate terminal box for temperature detectors, standard material

Accessories

Built-in brake (variant code 412)

Brake design

Electromagnetic disc brakes are applied by the action of a set of springs and are released when voltage is applied to the brake coil.

This means that the motor will brake automatically in case of any voltage failure, as significant safety feature. The brake is always functional, irrespective of the mounting position of the brake motor.

Detailed view

- 1 Connection box, (with rectifier, optional)
- 2 Manual release (optional)
- 3 Modified N-end shield
- 4 V-ring seal
- 5 Adapter flange for brake
- 6 Brake
- 7 V-ring seal
- 8 Fan cover
- 9 Fan

Brake disc

The brake linings are made of asbestos-free material. The linings are highly resistant to wear and have excellent thermal conductivity, providing consistent performance also in high temperatures.

The brake disc withstands a large number of braking instances and is insensitive to dust and moisture.

Note that changing from a used to a new disc will result in a different braking torque.

Replacing the brake disc

The brake disc must be replaced when the minimum permissible lining thickness has been reached. For minimum lining thickness, refer to the brake manufacturer's catalog.

Rectifier

Rectifier is a device for DC brake applications. It is highly resistant to temperature changes as well as to voltage peaks and has additional protection for the auxiliary contact of the contactor. Thanks to its compact design, it can be placed inside the motor's terminal box. Rectifier is an optional element.

Torque adjustment

Reducing the torque of the brake is possible with most brake types. Refer to the brake manufacturer's catalog or contact ABB for more information.

Manual release

Manual release bolts are provided as standard. A manual release handle is an optional element. Manual release overrides the action of brake springs as long as it is applied.

Though the manual release handle is optionally available for all motor sizes, it cannot be used in combination with the Pintsch Bamag brake type SFB.

Brake rating plates

The brake comes with two rating plates, one attached to the brake itself and another delivered loose, together with the motor. Variant code 412 is marked on the motor's rating plate (if it is listed among the five first codes on the motor order).

01 Foot-mounted: IM B3 (IM1001), IM B6 (IM 1051), IM B7 (IM1061), IM B8 (IM 1071), IM V5 (IM 1011), IM V6 (IM 1031).

02 Flange-mounted: IM B5 (IM 3001), IM V1 (IM 3011), IM V3 (IM 3031), IM B14 (IM 3601), IM V18 (IM 3611), IM V19 (IM 3631).

03 Foot- and flange-mounted: IM B35 (IM 2001), IM V15 (IM 2011), IM V36 (IM 2031).

Available brake types

Motors can be fitted with recommended brakes from either Pintsch Bamag or Stromag, as seen in the tables below. Other brakes can be provided on request.

Brake type	Brake torque Nm	For motor size
KFB 10	100	160
KFB 16	160	160 - 180
KFB 25	250	180 - 225

Brake type	Brake torque Nm	For motor size
NFF 10	100	160
NFF 16	160	160 - 180
NFF 25	250	180 - 225
NFF 40	400	200 - 250
NFF 63	630	225 - 250

For sizes 280-450 on request

Stromag, type NFF, 110 V DC, IP66

Options for the brake

On new manufacture only

- Hand release (not possible for Pintsch Bamag brake type SFB)
- Rectifier
- Micro switch
- Proximity switch (not possible for Stromag brake)
- Standstill heater

On request

- Special brake voltage
- Raised brake torque
- Combination with brake, separate cooling fan and/or tachometer
- For other variants, please contact ABB

Fan on top, N-end

The non-axial fan available for motor sizes 280 and above is a Ziehl-Abegg fan with an integrated motor. This cooling option is suited for 400 V, 50 Hz networks and can be ordered with variant code 422.

MV at 50 Hz Main motor	Fan motor type	Voltage V	Freq. Hz	Power kW	Current A
M3BP 280	Ziehl-Abegg RH35	400 VY	50	0.35	0.83
		460 VY	60	0.5	0.9
M3BP 315	Ziehl-Abegg RH40	400 VY	50	0.50	1.0
		460 VY	60	0.8	1.4
M3BP 355	Ziehl-Abegg RH45	400 VY	50	0.90	1.8
		460 VY	60	1.4	2.2
M3BP 400	Ziehl-Abegg RH50	400 VY	50	1.55	3.3
		460 VY	60	2.5	4.3
M3BP 450	Ziehl-Abegg RH56	400 VY	50	2.30	4.5
		460 VY	60	2.5	4.3

Special motor and fan on top, N-end

A special ABB fan motor type is available for motor sizes 280 and above. It is suited for environments where IP 65 is the required IP class or where the input voltage must be other than 360 – 420 V (50 Hz).

The values here are given for 400 V, but technical data for other voltages can be found in MotSize.

The centrifugal impeller used in the fan is a Ziehl-Abegg impeller. This type of cooling can be ordered with variant code 514.

Special motor and fan on top, N-end, for motor sizes 280 - 450

Main motor	Fan motor type	Voltage V at 50 Hz	Power kW	Current A
M3BP 280 - 315	M3BP 80 MD 4 B34	400	0.75	1.83
M3BP 355	M3BP 90 SLD 4 B34	400	1.5	3.0
M3BP 400	M3BP 100 LD 4 B34	400	3.0	6.3
M3BP 450	M3BP 112 MB 4 B34	400	4.0	8.2

Accessories

Silencer for motor sizes 280 - 450

Both foot-mounted and flange-mounted motors can be fitted with a silencer to reduce noise level by about 5 - 6 dB(A). The silencer is painted blue and made of 2 mm steel sheet. The sound absorbing material is 40 mm thick polyurethane foam. On the rim there is a rubber strip for sealing on the floor. The silencer fits loosely over the motor.

The variant code for ordering a silencer is 055.

Motor size	AV	LV	LVT	DV	O ¹⁾	S ²⁾	Weight kg
280 SM_	681	1010	1090	616	50	762	38
315 SM_	760	1094	1191	697	60	852	47

450 L_	1050	2110	2230	990	80	1045	120

¹⁾ Clearance for motor cooling.

²⁾ Clearance for removal of silencer.

Note: The dimensions are only valid for standard foot-mounted motors.

Accessories

Slide rails for motor sizes 160 - 250

1 Motor | 2 Rail | 3 Movable adjusting bolt | 4 Fixing bolt, motor | 5 Plate

A set of slide rails includes two complete rails with screws for mounting the motor on the rails. Screws for mounting the rails on the foundation are not included. Slide rails have unmachined lower surfaces and should, before tightening down, be supported in a suitable manner. Slide rails can be ordered with article numbers shown in the table.

		Article no.														Weight/

Accessories

Slide rails for motor sizes 280 - 400

Slide rails for motor sizes 280 - 315.

Slide rails for motor sizes 355 - 400.

Note: Slide rails that do not fulfill the DIN standard are available for motor size 450 on request.

A set of slide rails includes two complete rails with screws for mounting the motor on the rails. Screws for mounting the rails on the foundation are not included. Slide rails have unmachined lower surfaces and should be supported in a suitable manner before tightening down.

Slide rails can be ordered with article numbers shown in the table.

Efficiency values are given according to IEC 60034-2-1; 2014

For detailed dimension drawings please see our web-pages 'www.abb.com/motors&generators' or contact ABB.

Rating plates

- 01 Motor sizes 71 to 80.
- 02 Motor sizes 90 to 132.
- 03 Motor sizes 160 to 280.

The motor's main rating plate shows the motor's performance values with various connections at nominal speed. The rating plate also shows the efficiency level (IE2, IE3, or IE4), year of manufacture, and the lowest nominal efficiency at 100, 75, and 50 % nominal load. The material of the rating plate is aluminum as standard.

Variant codes

Aluminum motors

Variant codes specify additional options and features to the standard motor. The desired features are listed as three-digit variant codes in the motor order. Note also that there are variants that cannot be used together.

Most of the variant codes apply to IE2 and IE3 motors. However, confirm the availability of variants for IE3 motors with your ABB sales office before making an order. Variant codes for L generation motors on request!

Mechanical design

Motor frame and drain holes

Motor frame

The motor frame is made of aluminum alloy. Frame sizes 56 to 180 have aluminum feet and sizes 200 to 280 have cast iron feet.

The bearing end shields of sizes 56 to 132 are made of aluminum, and those of 160 to 280 are made of cast iron.

Drain holes

Motors that will be operated in very humid or wet environments and especially under intermittent duty should be provided with drain holes. The IM designation, such as IM 3031, determines the intended mounting arrangement for the motor.

Motors are provided with closable plastic plugs in the drain holes. The plugs on delivery, when mounting the motors, ensure that the drainholes face downwards. In the case of vertical mounting, the upper plug must be hammered home completely. In very dusty environments both plugs should be hammered home.

Motors are supplied with drain holes both at the D-end and N-end.

When mounting arrangement differs from foot mounted IM B3, please use variant code 066 when ordering. See variant codes 065, 066 and 076 under the heading “Drain holes”.

Mechanical design

Bearings

The motors are provided with bearings according to the tables below.

Greater axial forces can be tolerated if the motors are provided with angular contact ball bearings.

Standard design: deep groove ball bearings

Motor size	Foot- and flange-mounted motor	
	D-end	N-end
56	6201-2Z/C3	6201-2Z/C3
63	6201-2Z/C3	6201-2Z/C3

³⁾all types except ⁴⁾SM_

Note that in such cases the axial force must only operate in one direction.

Motor versions with roller bearings tolerate greater radial forces.

Alternative design with roller bearings

It is recommended to use roller bearings in belt drives for motor sizes 160 to 280.

See variant code 037 under the heading “Bearings and lubrication”.

Transport locking

Motors provided with roller bearings or angular contact ball bearings are fitted with a transport lock to prevent damage to the bearings, due to vibration, during transport.

- 01 Motor sizes 71 - 132.
- 02 Motor sizes 160 - 250.

Axially locked bearings

The table below shows which of the motor's bearings are axially locked in the bearing seat. In motor size 63 the locking is done by an internal retaining ring, in motor sizes 71 to 280 by an inner bearing cover.

Motor size	Foot-mounted motors	Flange-mounted motors	
		Large flange	Small flange
56	N/A	N/A	N/A
63	N/A	N/A	N/A
71-132	D-end ¹⁾	D-end ¹⁾	D-end ¹⁾
160-280	D-end	D-end	-

¹⁾ A spring-washer at the N-end presses the rotor toward the D-end.

Bearing life and lubrication

Bearing life

The nominal life is defined as the number of hours that are attained or exceeded by 90 percent of identical bearings, in a large test series, under certain specified conditions. 50 percent of the bearings attain a life of as much as 5 times this figure.

The life of bearings is dependent on various factors such as bearing load, motor speed, operating temperature and the purity of the grease. The permissible radial and axial loading for different motor sizes is shown in the table on the following pages.

The table is valid for 50 Hz. For 60 Hz and/or some other bearing life than specified in the table the values are changed according to the table below.

The table values assume the occurrence of only radial or axial forces. In the case of simultaneous radial and axial forces information can be supplied on request. It is assumed that the radial force is applied at the end of the motor shaft.

Permissible force at changed bearing life or supply frequency

Bearing life in hours at		
50 Hz	60 Hz	
25 000	21 000	100 % of value for 25.000 hours
40 000	33 000	100 % of value for 40.000 hours
63 000	52 000	86 % of value for 40.000 hours
80 000	67 000	80 % of value for 40.000 hours

Lubrication

The motors are delivered with bearing grease for use at normal temperatures in dry or humid environments. The motors are lubricated for ambient temperatures 40°C and in other temperatures above 40°C, see table next page.

Motor sizes 63 to 250 are provided with shielded bearings. As an option, motor sizes 90 to 250 are provided with grease nipples for regreasing, see variant code 041 under the heading "Bearings and lubrications".

Motor size 280 is provided with grease nipples for re-greasing as standard.

The lubrication interval L_1 , suitable for relubricated bearings, is defined as the number of operating hours after which 99 percent of the bearings are adequately lubricated.

Lubrication intervals and grease quantities are specified on a plate on the motor as well as in the manual supplied with the motor.

The grease lifetime L_{10} , suitable for permanent lubricated bearings, is defined as the number of operating hours after which 90 percent of the bearings are adequately lubricated. 50 percent of the bearings achieve two times this figure. Maximum lifetime, however, should be regarded as 40,000 hours.

In case of high ambient temperatures the shaft loads must be reduced compared to permissible loadings in the table, please contact ABB.

Lubrication intervals

ABB follows the L_1 -principle in defining lubrication interval. That means that 99 percent of the motors are sure to make the interval time. The lubrication intervals can also be calculated according to the L_{10} -principle, which are normally doubled compared to L_1 -values. Values available from ABB at request.

The table below gives lubrication intervals according to the L_1 -principle for different speeds. The values are valid for horizontal mounted motors (B3), with about 80°C bearing temperature and using good quality grease with lithium complex soap and with mineral or PAO-oil.

For more information, see ABB's Low Voltage Motors Manual.

Lubrication intervals for ball and roller bearings

Frame size	Amount of grease g	3600 r/min	3000 r/min	1800 r/min	1500 r/min	1000 r/min	500-750 r/min
Ball bearings: lubrication intervals in duty hours							
280	60	2000	3500	-	-	-	-
280	70	-	-	8000	10 500	14 000	17 000
Roller bearings: lubrication intervals in duty hours							
280	60	1000	1750	-	-	-	-
280	70	-	-	4000	5250	7000	8500

Grease lifetime

In vertically mounted motors, the grease lifetime is half the figures as in following table. For applications corresponding to the empty cells in the table, please contact ABB. These applications can imply reduced lifetime for bearings and winding. Motors with roller bearings (optional) have considerably shorter grease life. For continuous operation regreasing nipples should be considered.

Grease lifetime

Grease lifetime L_{10} in deep groove ball bearings of type 2Z in horizontally mounted motors in continuous running duty.

Mechanical design

Radial forces

Permissible loading on shaft

The tables give the permissible radial force in Newtons, assuming zero axial force, ambient temperature of 25°C.

Permissible loads of simultaneous radial and axial forces will be supplied on request.

The bearing life, L_{10} , is calculated according to SKF's theory on bearing life $L_{10\text{aah}}$, which also takes the purity of the grease into consideration. An adequate lubrication is a necessary prerequisite for the table at right.

If the radial force is applied between points X_0 and X_{max} , the permissible force F_R can be calculated from the following formula:

$$F_R = F_{X0} - \frac{X}{E} (F_{X0} - F_{X\text{max}})$$

Where:

E: length of the shaft extension in the standard version

Mechanical design

Axial forces

01 Mounting arrangement IM B3.

02 Mounting arrangement IM V1.

The following tables present permissible axial forces on the shaft in Newtons, assuming zero radial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life of 20,000 and 40,000 hours per motor size.

At 60 Hz, the values must be reduced by 10 percent, and for two-speed motors, the higher speed determines permissible axial force. Permissible loads of simultaneous radial and axial forces can be supplied on request.

For axial force F_{AD} , it is assumed that the D-bearing is locked with a locking ring.

⁴⁾ The maximum lifetime of the grease is 16 000 h

Mechanical design

Terminal box

Sizes 56 to 180

The terminal box is made of aluminum alloy and is located on top of the stator. The lower part of the box is integrated with the stator. It is provided with two knockout openings on each side. Sizes 132 SM_ and 160 - 180 also have a third smaller opening. Cable glands are not included.

Sizes 200 to 280

The terminal box and cover are made of deep drawn steel and mounted on top of the stator. The box is bolted to the stator and is not rotatable. The size of the box is the same for all frame sizes.

The motors can also be provided with an extra large terminal box, standard for voltage code S and frame size 280. See variant code 019 under the heading "Terminal box". This will increase the dimension HD by 32 mm. The box is supplied with two FL 21 openings. The right opening is provided with a flange with two holes for M63 cable glands. The holes are sealed by means of plastic plugs. Cable glands are not supplied. The opening on the other side is provided with a cover flange. The box can also be provided with an FL 13 opening towards the N-end.

When new motors are manufactured the terminal box can be mounted on the left or the right side. See variant codes 021 and 180 under the heading "Terminal box".

In the basic design the terminal box is provided with two FL 13 flange openings, one on each side. The opening on the right side, seen from the D-end, is supplied with a flange with two holes for M40 cable glands. On delivery the holes are sealed by means of plastic plugs. Cable glands are not supplied. The opening on the other side is provided with a cover flange.

Dimensions for terminal box

Motor size	Dimensions		
	HB	HD	HE
Code 019: Larger than standard terminal box			
200 ML	332.5	603	240
225 SM	353	578	260.5
250 SM	376	626	283.5
Code 021: Terminal box on left-hand side seen from D end			
Code 180: Terminal box on right-hand side seen from D end			
200 ML	332	532	239
225 SM	354	579	260.5
250 SM	377	627	284
Code 467: Lower than standard terminal box without screw terminals and extended rubber connection cable 2 m.			
160	211.5	371.5	
180	226.5	406.5	
200 ML	248	448	
225 SM	269	494	
250 SM	292	542	
280	292	572	

Refer to the Dimension drawings section for dimensions HB, HD and HE.

Connections

01 Terminal board for motor sizes 56 to 80.

02 Terminal board for motor sizes 90 to 112.

03 Terminal board for motor size 132.

04 Terminal board for motor sizes 160 to 180 in G-generation.

05 Terminal board for motor sizes 160 to 200 in L-generation.

06 Terminal board for motor sizes 200 to 280 in G-generation.

07 Terminal board for motor sizes 225 to 280 in L-generation.

The terminal block is provided with six terminals for connecting Cu-cable. The terminals are marked in accordance with IEC 60034-8.

Connection openings

Motor size	Opening	Metric cable entry	Method of connection	Terminal bolt size	Maximum connectable Cu-cable area, mm ²
56-63	Knock-out opening	2x(M16+M16)	Cable lug	M4	2.5
71-80	Knock-out opening	2 x (2 x M20)	Cable lug	M4	4
90-112	Knock-out opening	2 x (M25 + M20)	Screw terminal	M4	6
132 ¹⁾	Knock-out opening	2 x (M25 + M20)	Cable lug	M5	10
132 ²⁾	Knock-out opening	2 x (M40 x M32 + M12)	Cable lug	M6	35
160-180	Knock-out opening	2 x (2 x M40) + M16	Cable lug	M6	35
200-250	2 x FL 13	1 x (2 x M40 + M16)	Cable lug	M10	70
280	2 x FL 21	1 x (2 x M63 + M16)	Cable lug	M10	70

¹⁾ Smaller sizes on request.

Each set includes two complete slide rails including screw for mounting the motor on the rails. Screws for mounting the rails on the foundation are not included. Slide rails are supplied with unmachined lower surfaces and should, prior to tightening down, be supported in a suitable manner.

Motors in brief

Aluminum motors, sizes 56 - 132

Motor size	M3AA	56-63	71	80	90	100	112	132
Stator and end shields	Material	Die-cast aluminum alloy						
	Paint colour shade	Munsell blue 8B 4.5/3.25						
	Corrosion class	C3 medium according IEO/EN 12944-5						
Feet	Integrated aluminum feet							
Bearings	D-end	6201-2Z/C3	6203-2Z/C3	6204-2Z/C3	6205-2Z/C3	6306-2Z/C3	6306-2Z/C3	6208-2Z/C3 6308-2Z/C3 (SM)
	N-end	6201-2Z/C3	6202-2Z/C3	6203-2Z/C3	6204-2Z/C3	6205-2Z/C3	6205-2Z/C3	6206-2Z/C3
Axially-locked bearings	Inner bearing cover	ND-end re- taining ring	Locked at D-end					
Bearing seal	D-end	V-ring						
	N-end	Labyrinth seal						
Lubrication	Permanent grease lubrication. Grease temperature range -40°C to +160°C							
Measuring nipples for condition monitoring of the bearings	Not included							
Rating plate	Material	Aluminum						
Terminal box	Material	Die-cast aluminum alloy, integrated to stator						
	Cover screws material	Zinc-electroplated steel						
Connections	Openings	2x(M16+M16)	2x(M20 + M20)		2x(M20+M25)		2x(M20+M25) ¹⁾ 2x(M40+M32+M12) ²⁾	
	Terminals	6 terminals for connection with cable lugs (not included)						
	Cable glands	Optional						
Fan	Material	Glass-fiber reinforced polypropylene						
Fan cover	Material	Polypropylene						
	Paint colour shade	Munsell blue 8B 4.5/3.25						
	Corrosion class	C3 medium according IEO/EN 12944-5						
Stator winding	Material	Copper						
	Insulation	Insulation class F						
	Winding protection	Optional						
Rotor winding	Material	Die-cast aluminum						
Balancing	Half key balancing							
Key ways	Closed key way							
Drain holes	Without drain holes		Drain holes with closable plastic plugs, open on delivery					
External earthing bolt	As option							
Enclosure	IP 55							
Cooling method	IC 411

Enclosure		IP 55					
Cooling method		IC411					

Total product offering

Motors, generators and mechanical power transmission products with a complete portfolio of services

IEC motors

- Low voltage motors
- High voltage induction and synchronous motors
- Marine motors
- Motors for explosive atmospheres
- Motors for food and beverage
- Motors for variable speed drives
- Permanent magnet motors
- Synchronous reluctance motors
- Traction motors

NEMA motors

- Low voltage motors
- High voltage induction and synchronous motors
- Marine motors
- Motors for explosive atmospheres
- Motors for variable speed drives
- Permanent magnet motors
- Servomotors
- Washdown motors

Generators

- Generators for wind turbines
- Generators for diesel and gas engine power plants
- Generators for steam and gas turbine power plants
- Generators for marine applications
- Generators for industrial applications
- Generators for traction applications
- Synchronous condensers for reactive power compensation

Mechanical power transmission components, bearings, gearings

- Mounted bearings
- Enclosed gearing
- Mechanical drive components
- Couplings
- Sheaves and bushings
- Conveyor components
- Geared motor units

Life cycle services

ABB's portfolio of drives

Optimal solution for you

Being able to rely on the continuous high performance and efficiency of your operations is something you want to take for granted. ABB variable-frequency drives are made with all this in mind, established upon more than 40 years of experience and backed by a broad range of life cycle services.

ABB drives help you to optimize your processes and systems with state-of-the-art motor control technology, resulting in increased energy efficiency, better product quality, and reduced operating costs with higher output, less downtime, and reduced need for maintenance. All ABB drives are designed for easy selection, ordering, installation and use, and they offer integrated safety features, giving you more time to focus on what matters for you and your business.

Our portfolio offers low-voltage AC and DC drives, medium-voltage AC drives, and motion control drives spanning the fractional-kilowatt to multi-megawatt power level. There is a drive available for essentially every industry and application and for all types of motors, in environments ranging from water utility facilities to clean electrical rooms, and to harsh coal mines and windy offshore platforms to food and beverage production. This wide product range allows you to select the best-fitting drive solution, providing maximum reliability and efficiency for every need.
